1. ABOUT SUSENAS 2010

Indonesia Social and Economic Survey (Susenas 2010) is a nationwide survey conducted to collect information on social and economic indices. It serves as a main source of monitoring the social and economic progress in the society. Susenas has been conducted on an annual basis since 1963. Since 1992, in addition to a basic social and economic questionnaire (core), an additional questionnaire was introduced which gathers more detailed information on special interest topics (module).

Module surveys are intended to gather more detailed information on specific topics, especially on data that changes less frequently than yearly. There are three modules of Susenas and each module is added in a three-year cycle. Nevertheless, for the year 2010 only core survey was conducted, where there should be a module on health and housing. The module survey is not conducted with the consideration that in 2010 the Central Bureau of Statistics has to conduct Population Census (SP 2010) which has the same information that should be gathered from the module survey.

Sampling Method

The SUSENAS data is collected using a stratified multi-stage cluster sampling with two strata (urban and rural area) for each district/municipality. Within each district/municipality, a 2-stage cluster sampling method is applied to urban areas, while rural areas sampling follows a 3-stage cluster sampling design.

Urban areas are divided into census blocks (CBs), each comprises approximately 100 households. The first stage of the sampling involves choosing a number of CBs using linear systematic sampling. From each selected census block, sixteen households are selected for interview by using linear systematic sampling.

For rural areas, a number of sub-districts (Kecamatan) are selected from the list using the "proportional to size" (PPS) principle, so that the probability of each sub-districts being selected is proportional to its size (i.e. number of households). From each selected sub-district, a number of census blocks were selected. Then, from each of these selected CBs sixteen households are selected for interview by using linear systematic sampling

Questionnaire

The Core questionnaire (form VSEN2010.K) includes questions regarding basic social and economic conditions. The information gathered from this questionnaire is often referred to as the Susenas Core. The Susenas core is conducted annually with only slight changes of questions (addition, deletion or modification) over the years.

5. PROVINCE AND DISTRICT/CITY CODES

The codes in this list consist of 4 digits.

The first two digits represent the province code in the datasets (b1r1) , the last two digits represent the district/city in the datasets within that province (b1r2)

Code XYY:

XX represents a province code (Note a Province level coded XX00)

YY represents a district/city code within Province XX

Example:

1100 : Province Nanggroe Aceh Darussalam

1101 : Simelue : This district (coded 01) is located in Nanggroe Aceh Darussalam Province (coded 11)

1172 : Kota Sabang: This city (coded 72) is located in Nanggroe Aceh Darussalam Province (coded 11). Please note that there are two types of governmental administrations with similar level of hierarchy: Kabupaten (district) and Kota (city). The first of two digits code for Kota begins with 7.
